**PERSIAN (ENGLISH) WALNUT**

**VARIETIES NOT LISTED IN CATALOGUE**

**NEBO**—(Error in Catalogue) Originated in Lancaster County, Penn. Considered one of the finest Eastern varieties. The nut is quite large resembling the Parisienne. The kernel is plump and of very good quality. Tree hardy.

**POMEROY**—Originated near Lockport, N. Y. The nut is of medium size; their kernel is very plump and of excellent quality. Tree hardy and good bearer.

**FRANQUETTE**—Originated in France. Nut medium to large; very attractive; kernels plump, white, sweet and nutty; quality excellent. Brings highest prices in the markets. One of the favorites in California, Oregon and Washington.

**MAYETTE**—The famous walnut of France where it is grown more than any other walnut. Commands the highest prices. Strictly fancy, very productive; blooms late, ripens early; nut large, perfectly filled with kernel, nutty rich and sweet. Tree hardy.

**PARISIENNE**—Considered the best and most productive of the French walnuts by orchard men on the Pacific Coast. More productive than the Franquette or Mayette, and has all of their good qualities. Tree grows rapidly, foliage dense. Tree hardy.

**OPINIONS OF EXPERTS**

Everyone who has a place to grow any tree should grow a nut tree. Why set trees for foliage alone when productiveness may also be combined? The apple, peach and pear do this for us, it is true, but nut trees need no spraying and little care, live long and return a delicious product that gathers itself and keeps indefinitely without cold storage.—Dr. W. C. Deming, Georgetown, Conn.

It is perfectly safe to plant the English Walnuts wherever the peach grows.—G. D. Rush, West Willow, Pa.
